

LE VAN TUAN

Backend Software Engineer

letuanptm@gmail.com • <https://www.linkedin.com/in/garpherm> • Hanoi, Vietnam

Summary

Backend Software Engineer with 2+ years of experience building scalable web applications using Spring Boot and microservices architecture. Experienced in designing high-throughput systems with Kafka, Redis, and PostgreSQL, handling large-scale transactional data. Improved system performance and reliability through query optimization, caching strategies, and asynchronous processing.

Experience

TLH Vietnam Technology Joint Stock Company	Hanoi, Vietnam
Java Developer	03/2024 - Present
- Developed scalable full-stack features using Spring Boot and ReactJS for high-traffic systems (Tendoo, Viettel.vn) - Designed and implemented RESTful APIs using Spring Boot, supporting high-concurrency business operations - Optimized PostgreSQL queries and indexing, significantly reducing API response time and improving system scalability - Collaborated in Agile teams to deliver scalable and high-availability features - Improved system reliability and scalability using Docker-based containerization and deployment workflows	

Projects

Tendoo Platform	Hanoi, Vietnam
Backend Developer	09/2025 - Present
- Migrated backend services from Golang to Spring Boot, redesigning system using microservices architecture and MyBatis - Developed core business features (inventory, order processing, e-invoicing) supporting large-scale transactional systems - Integrated external systems (tax authority, e-commerce platforms) for real-time invoice synchronization and automated tax processing - Designed event-driven data pipelines using Kafka and RabbitMQ, processing high-volume transactions and enabling real-time synchronization - Built supporting frontend features using Next.js to facilitate business operations and system monitoring - Deployed and maintained scalable systems using Docker, Kubernetes, and ArgoCD, ensuring high availability and low-latency performance - Contributed to a large-scale SaaS platform processing millions of records daily across inventory, transactions, and billing systems	
Viettel Digital Ecosystem	Hanoi, Vietnam
Fullstack Developer	03/2024 - 09/2025
- Developed and maintained scalable full-stack features for large-scale telecom platforms - Designed backend services for telecom configuration and voucher systems using microservices architecture - Integrated Redis caching and Elasticsearch search to improve system performance and data retrieval speed - Collaborated in Agile teams to deliver scalable, high-availability systems serving tens of thousands of users.	

Skills

Languages: Java • JavaScript • TypeScript • SQL

Backend: Spring Boot • Spring Boot • Microservices • REST APIs

Frontend: ReactJS • Next.js

Database: PostgreSQL • MySQL • Redis

DevOps: Docker • Kubernetes • AWS EC2 • Linux • Ubuntu

Message Queue: RabbitMQ • Kafka

Education

Electric Power University	Hanoi, Vietnam
Software Engineer : 3.51/4	09/2021 - 03/2026
